CheckID.co.za

Vendor & procurement pack

November 2026 · https://checkid.co.za

Product overview

Check ID SA (CheckID) provides fast structural validation of 13-digit South African ID numbers. We check format, date encoding, age, gender encoding, citizenship indicator, and Luhn checksum. Validations run in memory only — ID numbers and decoded results are not stored, logged, or sent to analytics.

The CheckID validation service (web checker, API and subscriptions) is not a government database lookup, Home Affairs verification, identity bureau, credit check, or document verification service. We validate whether an ID number is structurally valid; we do not confirm that a number belongs to the person presenting it.

API at a glance

- HTTPS REST API returning JSON
- Bearer token authentication via dashboard API keys
- Single-ID and bulk validation endpoints
- Sub-second structural validation for production workflows

Developer guide: https://checkid.co.za/api-documentation/developers-guide

Fair usage and plan scope

Business includes unlimited validations subject to our standard fair usage policy for teams and API use, with unlimited mobile app scanning included. Starter includes 1,000 API validations a month. No plan includes a published SLA or uptime guarantee — we provide commercially reasonable service and support only.

Full policy: https://checkid.co.za/fair-usage

Pricing snapshot (ZAR)

Plan	Monthly	Highlights
Pay as you go	R0	Unlimited single web checks plus a development API test key; paid reports by card, one at a time
Starter	R99	R80 of reports included per month; 1,000 single API validations per month; one user; unlimited mobile app scanning; no bulk
Business	R499	R800 of reports included per month; unlimited validations (fair usage); API, bulk, team (5 members); unlimited mobile app scanning
